Synonyms: cite, excerpt, extract, paraphrase, plagiarize, recite, repeat. To *quote* is to give an author's words, either exactly, as in direct quotation, or in substance, as in indirect quotation; to *cite* is, etymologically, to call up a passage, as a witness is summoned. In *citing* a passage its exact location by chapter, page, or otherwise, must be given, so that it can be promptly called into evidence; in *quoting*, the location may or may not be given, but the words or substance of the passage must be given. In *citing*, neither the author's words nor his thought may be given, but simply the reference to the location where they may be found; to *quote*, in the proper sense, is to give credit to the author quoted. To *paraphrase* is to state an author's thought more freely than in indirect quotation, keeping the substance of his thought and his order of statement, but changing the language, and commonly interweaving more or less explanatory matter as if part of the original writing. One may *paraphrase* a work with worthy motive for homiletic, devotional, or other purposes (as in the metrical versions of the Psalms), or he may *plagiarize* atrociously under the veil of paraphrase, appropriating all that is valuable in another's thought, with the hope of escaping detection by change of phrase. To *plagiarize* is to *quote* without credit, appropriating another's words or thought as one's own. To *recite* or *repeat* is usually to *quote* orally, though *recite* is applied in legal phrase to a particular statement of facts which is not a quotation; a kindred use obtains in ordinary speech; as, to *recite* one's misfortunes.

R

R r 𝔑 𝔯 *R r*

Roman. Black Letter. Script.

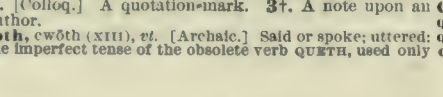
R, r, ār, *n.* [ARS, R's, or *Rs*, ārz. *pl.*] **1.** A letter: the eighteenth in the English alphabet; in Bell's "Visible Speech," ⌣. The sign of a trill or rustle at the tip of the tongue, beginning a syllable, as in *rat*, closing a syllable, as in *mer'ry*, sometimes syllabic, as in *ere*, *ore*, the vocal cords being close, so as to vibrate, and the nose closed.

The tongue-front is raised nearly to the *d* position, but the tip is not tightly closed: a murmur or rustle between the tip and the roof of the mouth, accompanied with a trill of the tip, is *r* sound; a similar opening of the front edges of the tongue gives *l*; tip and edges both open give *z*, or, with open vocal cords, *s*; tip and edges closed and nose open give *n*. For the intimate relations of *r* and *l* and other tongue-tip sounds, see L.

The same character is used for trills made in different parts of the mouth; that of the uvula is still common in French, and in some English dialects. In standard English the opening *r*- is so different from the closing *-r* that different signs (ɹ and ɻ) are used for them in Dr. Murray's New Historical Dictionary.

Opening *r*-, as in *ra*, is a strong consonant, one of the most constant of the Indo-European letters, and perhaps the rarest initial. The number of roots and of pages of words beginning with *r* in the Greek, Latin (words in *re-* not counted), German, and Anglo-Saxon dictionaries is smallest of all. In Greek it is accompanied by a rough breathing, and transliterated into Latin and English by *rh*. Anglo-Saxon had *hr*. *R, rh*, may follow other consonants (not *l, m, n, y*), but is followed only by a vowel sound.

Closing *-r* has a marked vocal murmur, generally treated as an additional vowel. A vowel is inserted before *-r* to represent it in *metr-* > meter, *theatr-* > theater, and the like; it displaces in sound any preceding vowel, as in *friar*, *speaker*, *nadir*, *author*, *sulfur*, *satyr*, all ending in the murmur *r*; it is recognized as existing in *here*, *hoiur*, *lore*, *lōur*, *mere*, *mīur*, and the like. A trill accompanies this *-r* in that region of America of which Chicago is the center; an audible consonant movement, not trilled, is heard from the larger number of distinct speakers throughout the northern United States; the tongue is raised to the *r* closure ready to open and opening to a following vowel whether in the same or the next word: in Southern English, as represented by H. Sweet, no *r* chamber is formed, but it is uttered for the vocal murmur, as in *mater*, *mītu*, or the *r* is dropped, as in *farther* = *father*. This pronunciation prevails in the United States in Virginia and the south, and is frequently heard in New England and elsewhere.



Sonant assimilation changes *s* to its nearest sonant, which in Latin and Anglo-Saxon (where is no *z*) is *r*: *wæs*, *wēron*, was, were, a regular change in Anglo-Saxon unless *s* is steadied by the accent: Verner's law). *N* is sometimes changed to a whispered *-r* after a surd or mute: French *ordre* < *ordin* < L. *ordinem*, order, French *coffre*, < L. *cophinum*, coffer.

In Anglo-Saxon *-r* breaks *a* vowels into *ea*, *i* into *eo*: *heard* < *hard*, *steorre*, star < *ster*; in English it raises *e* to *a*: *cerve* > carve, *sterve* > starve, *clerk* > clark. The need of much breath for *r* leads to closing the nose, which changes a preceding *m* to *b*, *n* to *d*: *timur* > timber, *thunner* > thunder. Before *l* and *s*, *r* is often assimilated in Latin.

The tongue-tip is the easiest to move of the vocal organs, and the continuous tongue-tip letter *r* the most frequent letter in English, averaging 7.41 per cent. of the sounds on the pages of English literature, 3.74 per cent. being opening *r*'s, 3.70 closing. WHITNEY *Oriental and Linguistic Studies* second series, p. 254. (S. '74.)

Capital *R* is from Latin R < early Gr. Lat. ꟽ < earlier Greek ꟽ (the tag being added to distinguish it from Greek Ρ) < Phenician ꟽ < Egyptian hieratic 𓂋 < hieroglyphic 𓂋. The hieroglyph represented a mouth. The Anglo-Saxon name is *rād*, counsel. The Greek name is *rhō*. The name *ār* is from Latin *er* strengthened as described above. It is the fifth letter of the futhorc. For lower-case, black letter, and dates, see A.

The history of the characters is represented as follows:

Hieroglyphic Mouth. Egyptian Hieratic. Phenician. Early Greek. Roman. English Script.

Valuable results in the treatment of *rabies* have been yielded by the method of Louis Pasteur, who has discovered that a large quantity of virus introduced into the cellular tissue in repeated injections of progressively increasing strength, beginning as soon as possible after the bite, produces immunity. This method of prevention he applied for the first time in July, 1885. The virus for inoculation is prepared as follows: A rabbit that has been inoculated with hydrophobia is taken immediately after death, and its spinal cord is extracted and placed in a vial, where it is protected against dust, and desiccated. The first injections are made with an emulsion of this cord after it has been desiccating for 14 days, and injections of increasing virulence are given progressively. The last injections must be made with the most virulent preparation, twice as active as virus from an ordinary mad dog, to obtain which it is necessary first to inoculate with the virus of a dog a rabbit which dies in about 18 days. From the latter another rabbit is inoculated, and so on, until about 20 rabbits have been inoculated. The virus has then become fixed, that is, the invasion takes place in the animal after about six days, and death occurs ten or eleven days after the injection. The inoculation in man is done with a hypodermic syringe, in the sides between the iliac crest and the ribs.

PAUL GIBIER *Letter to Standard Dict.* Apr. 26, '94.

Statistics of the anti-rabic treatment . . . [prove] beyond a doubt that the death rate from hydrophobia is greatly reduced. COLERIDGE *Works, Friend* in vol. ii, p. 144. [H. '58.]

If we have any knowledge at all of external things, it must be by *reason*, inferring their existence from what is immediately perceived by sense. BERKELEY *Principles of Human Knowledge* pt. i, ch. 2, p. 46. [TEGG '78.]

4. Specifically, the faculties that enable one to distinguish between the real and the imaginary, the true and the false, in the degree possessed by all sane persons, and to take part in the ordinary duties of life; the normal exercise of the rational faculties.

Laws are made and enforced on the supposition that all persons who have reached a certain age, arbitrarily fixed as the age of discretion, and are not deprived of their *reason*, have the capacity to know and obey them. MAUDSLEY *Responsibility in Mental Diseases* ch. 1, p. 24. [A. '75.]

5. That which is in conformity to general opinion; the mature consensus of public thought, free from prejudice or passion, that becomes a standard in the community; common sense; as, the anarchist was brought to *reason*. **6.** *Logic.* A logical ground for thinking; an antecedent; also, the premise or premises of an argument: generally the minor premise. See PRINCIPLE OF REASON AND CONSEQUENT; REASONING. **7.** That which is right or befitting; just procedure; a reasonable act or proposition; as, he ought in *reason* to be excused; it is not *reason* that we should do this.

Go home, sir, sleep, and have more *reason* in your wrath to-morrow. SCOTT *B. of Lammermoor* vol. i, ch. 7, p. 91. [E. & L. '93.]

8. *Psychol.* The mental power that furnishes or apprehends first principles and transcendental realities; intuition. In the Kantian use, made familiar to the English by Coleridge, the *pure reason* and the *practical reason* are distinguished. See phrases. Compare INTUITION; PRINCIPLE; UNDERSTANDING.

9†. The act or practise of reasoning. **10**†. Ratio; proportion. [OF., < L. *ratio;* see RATIO.]

Synonyms: account, aim, argument, cause, consideration, design, end, ground, motive, object, principle, purpose. While the *cause* of any event, act, or fact, as commonly understood, is the power that makes it to be, the *reason* of or for it is the explanation given by the human

mind; but *reason* is, in popular language, often used as equivalent to *cause*, especially in the sense of *final cause*. In the statement of any reasoning, the *argument* may be an entire syllogism, or the premises considered together apart from the conclusion, or in logical strictness the middle term only by which the particular conclusion is connected with the general statement. But when the reasoning is not in strict logical form, the middle term following the conclusion is called the *reason;* thus in the statement "All tyrants deserve death; Cæsar was a tyrant; Therefore Cæsar deserved death," "Cæsar was a tyrant" would in the strictest sense be called the *argument;* but if we say "Cæsar deserved death because he was a tyrant," the latter clause would be termed the *reason*. See INTELLECT; MIND; MOTIVE; REASONING.— **Prepositions:** the reason *of* a thing that is to be explained; the reason *for* a thing that is to be done.

SPENCER *Principles of Psychol.* vol. ii, § 300, p. 82. [A. '83.]

3. [Archaic.] Talk; discussion.

Synonyms: argument, argumentation, debate. *Argumentation* and *debate* always suppose two parties alleging reasons for and against a proposition; the same idea appears figuratively when we speak of a *debate* or an *argument* with oneself, as a *debate* between reason and conscience. *Reasoning* may be the act of one alone, as it is simply the orderly setting forth of reasons, whether for the instruction of inquirers, the confuting of opponents, or the clear establishment of truth for oneself. *Reasoning* may be either deductive or inductive. *Argument* or *argumentation* was formerly used of deductive *reasoning* only. With the rise of the inductive philosophy these words have come to be applied to inductive processes also; but while *reasoning* may be informal or even, as far as tracing its processes is concerned, unconscious, *argument* and *argumentation* strictly imply logical form. Hist.* Specifically, the great religious revolution of the 16th century, ending in the establishment of Protestantism. Its formal principle, according to Luther, is the Bible as the word of God; its material principle, justification by faith. Compare PROTESTANTISM.

The chief phases of the Reformation were: (1) The *Lutheran phase*, which began in Germany in the publication by Luther of his 95 theses, Oct. 31, 1517, at Wittenberg, which brought him ultimately into conflict with Pope Leo X. The revolt became general in northern Germany, and took form in the Diet of Augsburg (1530). (2) The *Reformed* or *Calvinistic phase*, which began in Switzerland under Zwingli in the German cantons (1516–'31) and Calvin in the French cantons (1536–'64), and extended to France and the Netherlands, and to Scotland under John Knox (1543–'72). Its advocates rejected both transubstantiation and consubstantiation, departed farther than the Lutherans from the received traditions in government, discipline, forms, and worship, and claiming to aim at a more radical, moral, and practical reformation of the people. The name *Reformed* was first applied to the Helvetic Church, and then extended gradually to all other religious bodies holding similar views. (3) The *Anglican phase*, in England, in which the first and negative period of the Reformation was separation from Rome under Henry VIII. (1527–'47); the second or more spiritual (1547–'73) was signalized by improved translations of the Bible, and adoption of Articles or Confessions; the third was reactionary under Queen Mary; and the fourth was the final establishment of the Protestant Church under Queen Elizabeth. re-li'a-ble, re-lī'a-bl, *a.* That may be relied upon; worthy of confidence; to be depended upon; trustworthy; as, a *reliable* narrative; the bridge is *reliable*.

The word *reliable* has been sharply challenged, but seems to have established its place in the language. The objection to its use on the ground that the suffix *-able* can not properly be added to an intransitive verb is answered by the citation of such words as *available, conversable, breathable*, and the like, while, in the matter of usage, *reliable* has the authority of Coleridge, Martineau, Mill, Irving, Newman, Gladstone,

and others of the foremost of recent English writers. The objection to the application of *reliable* to persons is not sustained by the use of the verb *rely*, which is applied to persons in the authorized version of the Scriptures, in the writings of Shakespeare and Bacon, and in the usage of good speakers and writers.

The first voyage to America, of which we have any perfectly *reliable* account, was performed by the Norsemen. R. B. ANDERSON *America Not Discovered by Columbus* ch. 5, p. 24. [S. C. G. '74.]

A man is said to be *reliable* with reference not only to moral qualities, but to judgment, knowledge, skill, habit, or perhaps pecuniary ability; a thoroughly *trustworthy* person might not be *reliable* as a witness on account of unconscious sympathy, or as a security by reason of insufficient means. On the other hand, we might say of one, he is an unprincipled fellow, but as a workman he is thoroughly *reliable*. A *reliable* messenger is one who may be depended on to do his errand correctly and promptly; a *trusty* or *trustworthy* messenger is one who may be admitted to knowledge of the views and purposes of those who employ him, and who will be faithful beyond the mere letter of his commission. We can speak of a railroad-train as *reliable* when it can be depended on to arrive on time; but to speak of a *reliable* friend would be cold, and to speak of a warrior girding on his *reliable* sword would be ludicrous.

—Renaissance architecture, a style that followed the Medieval, originating in Italy in the 15th century. At first an attempt to revive classical forms, it afterward became a style of decoration engrafted on the classical in Italy and upon the local forms of the Pointed in other European countries. It was introduced into France early in the 16th century. Palladio was one of its prominent expounders. See PALLADIAN. After the middle of the 16th century it declined in artistic rank. Notable examples are St. Peter's Church in Rome, the Louvre in Paris, and St. Paul's in London. See plate of ARCHITECTURE, fig. 17.—**R. painting,** Italian painting that succeeded the Byzantine in the 15th and 16th centuries. Originated earlier by Giotto (1266-1337) and developed under the Medici and Leo X., it culminated in Michelangelo, Raffaelo, Leonardo da Vinci, and Titian, and was distinguished by gradually increasing perfection in drawing, composition, and coloring, as shown in the "Last Judgment," the "Transfiguration," the "Last Supper," and Titian's portraits and Venuses. Its chief schools were at Rome, Florence, Venice, Bologna, Siena, and Urbino. Some of its greater artists were Angelico, Botticelli, the Lippis, Mantegna, Signorelli, Perugino, Fra Bartolommeo, the Bellinis, Tintoretto, and Paolo Veronese. HATTON *Hist. Printing* p. 29-142.

Re-nais"sance', *n.* **1.** [r-] A new birth; resurrection; revival. **2.** Specifically, the revival of letters, and then of art, which marks the transition from medieval to modern history. The Renaissance began in Italy in the 14th century and gradually spread over western Europe, until the domination of scholasticism, of feudalism, and of the church in secular matters was displaced by nationalism. Its precursor was "The Revival of Learning," incident upon the recovery of classical Greek and Roman literature, led by Petrarch and Boccaccio, and resulting in *humanism*. The movement soon extended to and transformed manners, philosophy, science, religion, politics, and art. The fall of Constantinople in 1453 sent many Greek scholars into exile throughout Europe. The passage of the Cape of Good Hope and the discovery of America, the invention of printing and paper-making, the acquisition of the mariners' compass, the contemporaneous spread of the Reformation, and the study of ancient classical art, all contributed to the Renaissance.

The most enviable distinction of the reign of Francis the First consisted in the fact that it was the era of that extraordinary development of the fine arts and of literature known as the *Renaissance*. BAIRD *Rise of the Huguenots* vol. i, ch. 1, p. 41. [S. '79.]

Republics had their origin in opposition to hereditary monarchy, as in Greece, Rome, and America, and their essential features have been the control of the executive by election and by laws proceeding from assemblies of enfranchised classes. Sometimes the enfranchised class was an oligarchy or aristocracy, as in some medieval Italian republics; sometimes military, as in Sparta and the earliest Roman republic; sometimes a well-nigh pure democracy, as in the first French republic with a single legislative chamber, an executive in commission, and manhood suffrage, or as in Switzerland with its *referendum.* Nearly all modern republics have a written constitution, practise manhood suffrage, vest sovereignty in the voters, choose the executive indirectly, as by some form of electoral college, or by the legislature, as in France or Switzerland, and entrust legislation to two coordinate chambers or houses, while the judiciary forms a coordinate branch of government, invested with power to pronounce on the constitutionality of laws and of executive acts. A **federal republic** has a central republican government with limited supremacy over the constituent republics. See FEDERAL.

2. *Physics.* (1) A prolongation or reenforcement of sound by means of sympathetic vibration, or the capability of producing such a continued sound. (2) By extension, the increase of vibration of any kind, as in electricity, by an intermittent force of the same period.

The principle of resonance depends on the fact that, to increase any movement of the nature of a vibration or oscillation, the force applied must act intermittently in the same period, as when a child moves a heavy swing by pushing always at the moment when the push has the greatest effect. The impulses are thus added together. An object capable of vibrating can always be set in motion in this manner by a neighboring object whose vibrations are in the same period, as when a note played on a musical instrument causes the same note on a neighboring stringed instrument to sound. The sounding-board of a piano, guitar, or the like is capable of responding to vibrations of many periods, and hence reenforces all tones equally; the air in a flue organ-pipe, on the other hand, can respond to one note only, and hence selects that one from the fluttering noise produced by the air at the lip. In electricity the principle is valuable in detecting and investigating electromagnetic waves. See RESONATOR.

rest'ive, -ly, -ness. Restive, etc. PHIL. Soc.

rest'ive, rest'iv, *a.* **1.** Characterized by restlessness with impatience of control; moving restlessly about; fidgety; as, a *restive* colt; the noise made his horse *restive.*

The ordinary sense of the word has always been 'unruly,' 'intractable,' 'refractory.' Proofs are subjoined from Lord Brooke, Dr. Fealty, Fuller, Milton, Jeremy Collier, Samuel Richardson, Burke, Coleridge, Mr. De Quincey, and Lander. As concerns a horse, however he resists an attempt to keep him quiet, he shows himself *restive.* FITZEDWARD HALL *False Philology* p. 97.

2. Impatient of control; chafing under restraint or coercion; refractory; rebellious; insubordinate; unruly.

The Egyptians, however, were *restive* under this foreign yoke. P. V. N. MYERS *Outlines of Anc. Hist.* pt. i, § 1, ch. 1, p. 31. [G. & CO. '88.]

3. [Archaic.] Unwilling to move forward; refusing to go; running backward; balky; stubborn. **4**†. Hard to work or move, as clay; stiff; unyielding. **5**†. Being at rest, or less active. [< F. *restif,* < *rester;* see REST[2], *n.*] **rest'ie**†; **rest'iff**†; **rest'y**†.

Synonyms: balky, fidgety, fractious, fretful, frisky, impatient, intractable, mulish, mutinous, obstinate, rebellious, recalcitrant, refractory, resentful, restless, skittish, stubborn, unruly, vicious. *Balky, mulish, obstinate,* and *stubborn* are synonyms of *restive* only in an infrequent if not obsolete use; the supposed sense of "tending to rest," "standing stubbornly still," is scarcely supported by any examples, and those cited to support that meaning often fail to do so. The disposition to offer active resistance to control by any means whatever is what is commonly indicated by *restive* in the best English speech and literature. Dryden speaks of "the pampered colt" as "*restiff* to the rein"; but the rein is not used to propel a horse forward, but to hold him in, and it is against this that he is "*restiff.*" A horse may be made *restless* by flies or by martial music, but with no refractoriness; the *restive* animal impatiently resists or struggles to break from control, as by bolting, flinging his rider, or otherwise. With this the metaphorical use of the word agrees, which is always in the sense of such terms as *impatient, intractable, rebellious,* and the like; a people *restive* under despotism are not disposed to "rest" under it, but to resist it and fling it off.— **Antonyms:** docile, gentle, manageable, obedient, peaceable, quiet, submissive, tractable, yielding.

— **rest'ive-ly,** *adv.*— **rest'ive-ness,** *n.*

rest'less, rest'les, *a.* **1.** Having no rest; always active or moving; never quiet; constantly agitated; as, the *restless* waves; *restless* machinery. **2.** Unable or disinclined to rest; given to incessant activity; uneasy; constantly seeking change; as, a *restless* character.

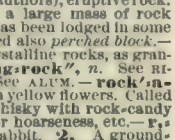
rock[1], *n.* **1.** *Geol.* The consolidated material forming the crust of the earth or any representative portion of it; specifically, any bed, layer, or mass of the earth's crust, whether consolidated or not, not excluding beds of clay or sand. A rock may consist of one mineral species, as limestone, or of several intermingled, as granite. Technically, a rock is a mixture of minerals, except when it is one species in a bed or mass. The constituents of rocks are mineral, though they may have been organic in origin. **Crystalline rocks,** if formed from fusion, are called **igneous rocks.** It is known that many of the later rocks are igneous, **plutonic** if formed beneath the surface, **volcanic** if consolidated on the surface of the earth. The larger part of the rocks of the visible crust have been formed by erosion of the older rocks, and by transportation of the detritus, and its deposition under water. These are called **clastic, sedimentary,** or **fragmental rocks;** when they are deposited in layers or beds, they are called **stratified,** to distinguish them from the igneous, which are essentially **unstratified. Sedimentary rocks,** when unaltered, are principally **arenaceous, argillaceous** (clayey in origin), or **calcareous** (of limestone), or mixtures of all three kinds. Limestones, when sedimentary, are formed from fragments of calcareous secretions of animals, as coral-animals, or of plants, as nullipores. Immense masses of sedimentary rocks have been greatly altered by heat and pressure into a semicrystalline or fully crystalline condition (**stratified crystalline** or **metamorphic rocks**). See METAMORPHISM.



The term *rock,* in its popular acceptation, embraces only the solid parts of the globe, but in geological language, it includes also the loose materials, the soils, clays, and gravels, that cover the solid parts. E. HITCHCOCK *Elementary Geology* § 1, p. 20. [I. & P. '54.]

—**Roman Catholic Church**, that organized part of Christendom in communion with the Pope or Bishop of Rome, and claiming to be the one holy catholic and apostolic church, in respect to which all other churches are schismatical or heretical. Theoretically, it also claims supreme spiritual authority on earth. Its teaching is based on the Scriptures and on tradition; its symbols or creeds are the Apostles', the Nicene, the Athanasian, and the Profession of the Tridentine Faith, set forth in 1564 by Pope Pius V., to which were added in 1854 definitions of the immaculate conception of the Virgin Mary, and in 1870 of papal infallibility. Nineteen general councils are accepted as ecumenical. The last or Vatican Council has not yet been formally concluded. It believes in seven sacraments. (See SACRAMENT.) Its liturgical rites center about the mass, in which it is held that there is an entire transubstantiation of the eucharistic elements into the body and blood of Christ and a perpetual but unbloody renewal of his vicarious sacrifice. It consists of all persons who, having received baptism, hold its doctrines and recognize its jurisdiction; it is governed by a hierarchy of which the episcopate and priesthood are the essential features, and the Bishop of Rome, chosen for life by the College of Cardinals, is the center of unity and the supreme head, without whose consent no bishop can be consecrated. (See POPE.) Its administration is directed by cardinals at the head of congregations, answering to political ministries, established in Rome by the sovereign pontiff. Its clergy are celibate in the Western churches, and grade from patriarchs to subdeacons, with four lower orders (ostiary, lector, exorcist, and acolyte). It has a vast monastic system comprising many orders known as *regulars* or *religious*, each having its own superiors, responsible to the bishops or directly to the Pope. Of recognized rites the Latin is almost exclusively observed in Europe, America, and missionary jurisdictions; the Ambrosian is still preserved at Milan, and the Mozarabic at Toledo; the Greek, Melchite, Bulgarian, Ruthenian, Maronite, Syro-Chaldean, Coptic, Armenian, and Rumanian are Eastern.

rose, *n.* **1.** Any shrub of the genus *Rosa*, usually hardy, erect, or climbing, with rod-like, prickly stems and unequally pinnate leaves. The shrubs of this genus in their wild state comprise 40 or 50 species, with two or three times as many varieties, distributed over the north temperate regions, and in their cultivated forms more than a thousand varieties. On account of the conflicting nomenclature which extends to the species, some of these varieties can not be assigned to the species from which they have been derived to the satisfaction of either experts or those in quest of information. The names and descriptions in the phrases below are therefore, in disputed or uncertain cases, given only according to the weight of authority. **2.** A flower of one of these shrubs. In the wild state they are single, and have 5 or rarely 4 petals, varying from pink to white, with numerous stamens and pistils, but in cultivation the stamens are transformed into petals, and the flowers become double.

Roses have been cultivated for ornament from the earliest times. The numerous varieties in cultivation are the product of comparatively few of the original distinct species, of which the **cabbage-rose** or **Provence rose** (*Rosa centifolia*) is believed to be the oldest in culture and the source of the most varieties. Some species, as the cabbage-, the damask-, and the musk-rose, are extensively cultivated for the products yielded by their flowers, such as rose-water and attar. **3.** Any one of various other plants or their flowers: so called from some real or fancied likeness to the true rose.
